

Sector Coverage Analysis - Data Limitation

Unfortunately, **the dataset does not contain sector or industry classification information** for the stocks. The available data includes ticker symbols, analyst firms, ratings, price targets, and returns, but no sector categorization.

What I Can Show: Most Covered Individual Stocks

While I cannot analyze sector coverage, I can show which **individual stocks** receive the most analyst attention:

Top 10 Most Covered Stocks:

1. **GOOGL (Alphabet)**: 993 recommendations, 71 unique firms
2. **AMZN (Amazon)**: 989 recommendations, 63 unique firms
3. **TSLA (Tesla)**: 982 recommendations, 50 unique firms
4. **NVDA (NVIDIA)**: 982 recommendations, 64 unique firms
5. **AAPL (Apple)**: 969 recommendations, 59 unique firms
6. **NFLX (Netflix)**: 952 recommendations, 79 unique firms
7. **CRM (Salesforce)**: 921 recommendations, 84 unique firms
8. **CMG (Chipotle)**: 903 recommendations, 59 unique firms
9. **MSFT (Microsoft)**: 899 recommendations, 72 unique firms
10. **PANW (Palo Alto Networks)**: 890 recommendations, 77 unique firms

Observable Patterns

From the ticker symbols, we can observe that **technology companies dominate the most-covered list**, including mega-cap tech (GOOGL, AMZN, AAPL, MSFT), semiconductors (NVDA, MU, AMD, INTC), software (CRM, PANW, WDAY, NOW, CRWD), and streaming (NFLX). Consumer discretionary stocks like CMG, LULU, NKE, TGT, and WMT also appear prominently.

To Answer Your Question Properly

To analyze sector coverage, you would need either:

- A separate table mapping tickers to sectors/industries
- Sector information added to this dataset
- An external data source with S&P 500 sector classifications
